PROBLEM STATEMENT

Create a platform for Dairy Farm Shop. The admin will be able to view categories and also be able to add/delete categories. Admin can sign In. It also allows admin to add companies and products related to Dairy Farm. Admin can also view invoices. An option to view sales between particular dates is also available.

OVERVIEW

Dairy production is an important component of livestock farming. The mission of the Dairy Farm Shop Management System is to create communication between rural area people and dairy management. Our main goal is to develop this application to encourage the dairy industry to go online and tech ready. Dairy Farm Shop Management System is a software application to maintain day to day transactions in a Dairy Farm Shop. This software helps to manage all the categories of products, their companies, product catalogue etc. A full-fledged software is required which will take care all these.
